U.S. Patent and Trademark Office						

Application/Control Number: 09/923,914

Art Unit: 3747

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Takano in view of Moriya. Takano teaches all of the limitations of claim 1 except the camshaft <a href="https://doi.org/10.2016/journal.com/html">holder</a> and the cylinder head are not separate elements. Instead, the cylinder head <a href="https://doi.org/10.2016/journal.com/html">contains</a> the holder element.

Moriya also teaches a camhaft holder which has a fuel pump mounted on one end, but the holder element and the cylinder head are separate parts.

It would have been obvious to make the holder part of the head of Takano into a separate element because this would have allowed for a replacement of the bearing of the holder without requiring the removal of the entire head, thus representing good engineering practice.

Claims 4, 9 and 12 are 5U.S.C. 103(a) as being unpatentable over Takano and Moriya as in Claim 1 above, and further in view of Yonezawa.

Application/Control Number: 09/923,914

Art Unit: 3747

Yonezawa uses a projection (37) which extends along a cylinder head as a rib connection between the head and the mounting surface for a fuel pump, Such a

Page 3

projection will inherently act as a reinforcement.

It would have been obvious to modify Takano as noted above and reinforce the

mounting using a rib since this was a known mechanical expedient for connecting a

mounting surface with an engine head.

Claims 10-11 are as being dependent upon a rejected base claim, but would be

allowable if rewritten in independent form including all of the limitations of the base

claim and any intervening claims.

Claims 5-8 are allowed.

The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure.

Any inquiry concerning this communication should be directed to Carl Miller at

telephone number 703-308-2653.

an S. Miller
